

**Amendments to the Claims:**

- 1) Please cancel claims 1-3 without prejudice or disclaimer of the subject matter thereof.
- 2) Please add claims 4-23.

**Listing of Claims:**

Claims 1-3 (Canceled).

Claim 4 (New): A multimedia room system for meditation of a user, said multimedia room system comprising:

a room having a door, four walls, a ceiling, and a floor;

a plurality of display monitors located on said walls and ceiling in an adjacent manner to completely cover said walls, said ceiling and said floor;

at least two cameras located in said room; and

a central unit located remote from said room and in communication with said monitors and said cameras, said monitors and said cameras being controlled by said central unit, said control unit being adapted to execute at least one program.

Claim 5 (New): The multimedia room system as set forth in claim 4, wherein one of said cameras being adapted to record images in said room for said program of said central unit, and the other of said cameras being adapted to monitor said room.

Claim 6 (New): The multimedia room system as set forth in claim 4 further comprising an armchair locatable in said room.

Claim 7 (New): The multimedia room system as set forth in claim 6 further comprising a button to indicate to a person located in said central unit that the user whishes to leave said room.

Claim 8 (New): The multimedia room system as set forth in claim 7 further comprising a clock.

Claim 9 (New): The multimedia room system as set forth in claim 6 further comprising a remote control located in front of said armchair for coordinating said camera for recording images.

Claim 10 (New): The multimedia room system as set forth in claim 4, wherein said ceiling in said room further comprising a rotating round monitor.

Claim 11 (New): The multimedia room system as set forth in claim 4 further comprising an air-condition, and a smoke absorption system.

Claim 12 (New): The multimedia room system as set forth in claim 4, wherein said central unit being adapted to communicate with the internet.

Claim 13 (New): The multimedia room system as set forth in claim 4 further comprising a wireless camera adapted to be monitored from inside said room.

Claim 14 (New): The multimedia room system as set forth in claim 4 further comprising a refillable odour cartridge connectable to said central unit which controls the activation of said odour cartridge.

Claim 15 (New): A multimedia room system comprising:  
a room having a door, four walls, a ceiling, and a floor;  
a plurality of display monitors located on said walls and ceiling in an adjacent manner to completely cover said walls, said ceiling and said floor;  
at least two cameras located in said room;  
an armchair locatable in said room;  
a remote control locatable in front of said armchair for coordinating one of said cameras; and  
a central unit located remote from said room and in communication with said monitors and said cameras, said monitors and said cameras being controlled by said central unit, said control unit being adapted to execute at least one program and to communicate with the internet;  
wherein one of said cameras is adapted to record for said program of said central unit, and the other of said cameras being adapted to monitor said room.

Claim 16 (New): The multimedia room system as set forth in claim 15 further comprising a button to indicate to a person located in said central unit that the user whishes to leave said room.

Claim 17 (New): The multimedia room system as set forth in claim 16 further comprising a clock.

Claim 18 (New): The multimedia room system as set forth in claim 15 further comprising a remote control located in front of said armchair for coordinating said first camera.

Claim 19 (New): The multimedia room system as set forth in claim 15, wherein said ceiling in said room further comprising a rotating round monitor.

Claim 20 (New): The multimedia room system as set forth in claim 15 further comprising an air-condition, and a smoke absorption system.

Claim 21 (New): The multimedia room system as set forth in claim 15 further comprising a wireless camera adapted to be monitored from inside said room.

Claim 22 (New): A method of using a multimedia room system, said method comprising the steps of:

providing a multimedia room system comprising: a room having a door, four walls, a ceiling, and a floor; a plurality of display monitors located on said walls and ceiling in an adjacent manner to completely cover said walls, said ceiling and said floor; at least two cameras located in said room; and a central unit located remote from said room and in communication with said monitors and said camera, said monitors and said cameras being controlled by said central unit, said control unit being adapted to execute programs;

executing a first program of said central unit while a user is in said room, said first program displays symbolic images to the user via said monitors on said walls and ceiling of said room;

determining if the user has selected a second program;

executing said second program upon selection thereof, said second program displays images to the user via said monitors and provides music to the user;

coordinating said camera through a remote control located in said room, said camera being adapted to record images from said room;

transferring said recorded image to said central unit;

displaying said recorded image to the user;

determining if the user has selected a third program;

executing said third program upon selection thereof, said third program being adapted to record images and sounds in said room; coordinating said camera through said remote control located in said room, said camera being adapted to record images and sound from said room; transferring said recorded image and sound to said central unit; displaying said recorded image and sound to the user; processing said record images from said second and third programs and transferring them to a fourth program; and executing said fourth program, said fourth program displays recorded images from other users.

Claim 23 (New): The multimedia room system as set forth in claim 22 further comprising the step of providing a code to the user associated with the said record images, erasing said record images from said second, third and fourth programs, and said central unit upon inputting of said code.
